

The ultimate journey management technology

Simple. Compliant. Safe.

Journey management technology, enabling organisations to ensure the safety of a travelling workforce in real-time.

Features

Real-Time Mobile GPS

High accuracy mobile GPS provides instant or last known location info with multiple timezones supported.

Auto Checkpoints + Alerts

Automated geolocation check-in notifications are sent with no driver interaction required.

Hands-Free Operation

JMS automates and manages the entire process to keep your workers hands-free and safe.

Fatigue notifications

Tired drivers are unsafe drivers. JMS will alert you if your workers have been on the road too long.

And Loads More Features ...

What is JMS?

JMS was developed to improve processes for the drive-in/drive-out (DIDO) market and is now used by many industries that require staff to be on the road for long distances.

Users create and submit their journey plans through the easy-to-use mobile app, identifying any hazards they may encounter along the route. Developed in conjunction with industry leaders, the system operates lean and doesn't have complicated workflows and processes.

Users can create and submit a Journey Management Plan (JMP) in less than three minutes end-to-end and the configurable approval process is even quicker.

Removing the inefficiencies of legacy paper-based, manual check-in systems along with providing critical improvements in safety is why JMS has been so successful with our clients in managing the compliance and logistics of DIDO movement and road travel.

Key Features

Real-Time Mobile GPS

High accuracy mobile GPS provides instant or last known location info with multiple timezones supported.

Offline capability

Create and complete a trip even if the mobile device is offline. JMS can still capture data using GPS.

Digital forms

Automated data and compliance for paper-free operations via integrated Digital Forms software.

IVMS integration

JMS can integrate with the vast majority of In-Vehicle Monitoring Systems.

Duress button

Ultimate safety assurance with an emergency button to trigger alerts and escalate responses.

Live, real-time insights

Monitor staff journeys in real-time and receive automatic live 'check-in' notifications at defined locations.

Verbal reminders

Verbal alerts for essentials such as rest breaks, so drivers never touch their phones on the road.

Fully customisable

Our team will work with you to create a personalised solution for your needs.

Efficiency and control

A centralised system allows for complete control over all aspects of your road travel requirements.

Auto checkpoints and alerts

Automated geolocation check-in notifications are sent with no driver interaction required.

Fatigue notifications

Tired drivers are unsafe drivers. JMS will alert you if your workers have been on the road too long.

'Always on' support

The global JMS support team is available to assist 24 hours a day, 7 days a week.

How it works

System access, check-in points, notification configuration and journey risk profiles are loaded and managed through a Company Administration portal.

Users create and submit a journey plan within minutes by selecting from pre-loaded routes or creating plans as required.

If journey approval is required, this can be done from the web portal, the mobile app or from an email. No more managing Excel spreadsheets or pdf attachments.

To begin an approved journey, users simply open the app and press start.

SMS, email and in-app push notification features allow administrators, managers and app end-users to send or receive real-time alerts, reminders and notifications.

Detailed reporting is available in a tailored dashboard or through built-in ad-hoc reporting functions. The system provides a complete solution for reporting on historical and future travel data.

Installation and Onboarding

JMS can be up and running in under an hour with a simple spreadsheet onboarding process.

STEP 1

The client completes an Excel template with users, locations and vehicles.

STEP 2

The JMS Team uploads the information to the back end of the system.

STEP 3

Once activated, the users all receive emails with login credentials and links to the app stores for download.

Associated investment options

JMS is reasonably priced with working models to meet your specific needs.

Business plans

\$25 per month

Business plans start from \$25 per user, per month.

Enterprise

200+ fleet

Fleets of 200+, National and Global rollouts can enter an enterprise agreement and benefit from bespoke pricing.
